

# PACIFIC HOISTS LAUNCHES An exciting new range of Electric Hoists.

---

Pacific Hoists; Australia's leader in the Materials Handling Equipment Industry is pleased to launch its very own electric hoist range to the lifting market.

Ranging from 500kg to 2000kg capacities, the new range meets both Australian and international standards.

The Chairman & CEO of Pacific Hoists, Richard Crake is very proud of the company's new branded range;

"Our new Pacific Electric Hoist range reinforces our commitment to provide quality lifting products to the Australian market. We have spent a lot of time researching the market in order to provide a product that is innovative, economical and above all the highest quality. The fact that it carries the Pacific Hoists name implies the highest quality and safety standards."

The range has four models; 250kg, 500kg, 1000kg & 2000kg. They all feature an IP65 Pendant with 24 volt control for operator safety together with overload protection, motor thermal protection and fuse protection to the control circuit.

The hoists total enclosed construction means that it can withstand harsh conditions like those found in chemical and electroplating plants. The hoists are supplied with Grade 80 zinc plated load chain which will also endure conditions such as rain, salt water and chemicals with minimal wear.

Upper and lower electrical limit switches are featured on all models and a reverse phase protection relay is featured on the 500kg, 1000kg and 2000kg models.

o introduced motorised trolleys to compliment their new range of hoists.

The new Pacific Hoist range complies with AS1418.2 and CE.
