

PACIFIC HOISTS . . .

THE OFFICIAL AUSTRALIAN DISTRIBUTOR

FOR DRUMGRAB™

Pacific Hoists; Australia's leader in the Materials Handling Equipment Industry is pleased to announce becoming the official distributor of the Australian made, multi award winning "DrumGrab".

As seen recently on the ABC TV's The New Inventors, The DrumGrab is a unique invention for safely attaching any 205L (44 Gal) drum with a lip to a lifting device. The innovation was so popular it won not only the Judges Choice award but also the People's Choice award on the show.

"Pacific Hoists are extremely excited about being a part of an Australian invention. In this day and age where safety is such a big concern, we are proud to be able to supply a product like Drum grab to a national audience." The Chairman & CEO of Pacific Hoists, Richard Crane says

The advantages of this new innovative product are endless and include a Working Load Limit of 1 tonne (in accordance with AS4991-2004 Lifting devices).

The DrumGrab is so easy to use it can be attached and released in seconds, and it can be attached to any lifting device including HIAB, forklift, tractor, hoists and jib cranes. Drums can be easily rolled into place, can be lifted and lowered onto their sides and can also be lifted from within a group of surrounding drums. No more wrestling drums out of the way to get to the one you want!

The DrumGrab is capable of both vertical and side lifts with steel and most plastic drums. This is also great for pouring from drums.

The DrumGrab PREVENTS injuries and spills. A MUST for any environment where drums are handled.
