JDN Air Hoists PROFI TI for Subsea Applications

Due to increased market demands for subsea hoists, JDN presented a concept study for this special application on the Offshore Europe 2009.

The Subsea Study results from the well known JDN PROFI TI Series and includes several modifications to make it fit for this special job.

The JDN PROFI Subsea Series is supplied by air or hydraulics. Besides a variable speed control the hoists will be fitted with an overload protection. Water depths down to 70 m shall be realisable. Altogether the hoists of the PROFI Subsea Series will be a super versatile tool, also suitable for horizontal and oblique use.

„For us the Offshore Europe was a great platform for the exchange of experience with the end user. And interesting discussions gave us a valuable support to move

the development of the JDN Subsea Series forward”, said Michael Schultheis, Director of Sales, J.D. Neuhaus, Germany.

You would like to learn more about the concept study of the JDN Air Hoists PROFI for subsea applications?

Then please ask for the leaflet “W 326”.
